

Amendments to the Claims:

This listing of Claims will replace all prior versions and listings of Claims in the application.

Listing of Claims:

1. (Currently amended) A method for updating first and second parameters of a recipient computer server control console from first and second donor computer server control consoles, said method comprising the steps of:

providing said recipient server control console having a parameter replication program installed thereon for controlling one or more respective servers coupled to said recipient server control console, providing a first donor server control console having said parameter replication program installed thereon for controlling one or more respective servers coupled to said first donor server control console and providing a second donor server control console having said parameter replication program installed thereon for controlling one or more respective servers coupled to said second donor server control console, said parameter replication program including a parameter replication recipient program and a parameter replication donor program;

selecting, by said recipient server control console, said first and second parameters to be updated;

identifying a first parameter to be updated by said first donor server control console and identifying a second parameter to be updated by said second donor server control console;

said recipient server control console registering with said first donor server control console to receive notification when said first donor server control console has an update to said first parameter;

said recipient server control console registering with said second donor server control console to receive notification when said second donor server control console has an update to said second parameter;

after the step of registering said recipient server control console with said first donor server control console, said recipient server control console receiving said notification from said first donor server control console and updating said first parameter from said first donor server control console accordingly; and

after the step of registering said recipient server control console with said second donor server control console, said recipient server control console receiving said notification from said second donor server control console and updating said second parameter from said second donor server control console accordingly.

2. (Canceled)

3. (Currently amended) A method as set forth in claim 1, further comprising:

a second recipient server control console which registers with said first donor server control console to receive notification when said first donor server control console has ~~an~~ said update to said first parameter, after the step of registering said second recipient server control console with said first donor server control console, said second recipient server control console receiving said notification from said first donor server control console and updating said first parameter from said first donor server control console accordingly.

4. (Currently amended) A method as set forth in claim + 3, wherein said first parameter is a ~~help desk phone number~~ comprises at least one of: a user ID, an authorization for said user ID, a password of a server operator, a grouping of servers managed by a server control console, an account information, a default settings for displays, a help desk telephone number for a server control console operator, a language designation for text displayed on a screen, an IP address of a server control console, an IP address of a server managed by said server control console, and wherein said second parameter comprises at least one of: a user ID, an authorization for said user ID, a password of a server operator, a grouping of servers managed by a server control console, an account information, a default settings for displays, a help desk telephone number for a server control console operator, a language designation for text displayed on a screen, an IP address of a server control console, an IP address of a server managed by said server control console.

5. (Canceled)

6. (Canceled)

7. (Currently amended) A method as set forth in claim + 4, further comprising the steps of:

said recipient server control console requesting said update to said first parameter ~~update~~ from said first donor server control console after the step of said recipient server

control console receiving said notification from said first donor server control console of said update to said first parameter, and before the step of said recipient server control console updating said first parameter from said first donor server control console accordingly; and

said recipient server control console requesting said update to said second parameter ~~update~~ from said second donor server control console after the step of said recipient server control console receiving said notification from said second donor server control console of said update to said second parameter, and before the step of said recipient server control console updating said second parameter from said second donor server control console accordingly.

8. (Currently amended) A computer program product for updating a first parameter and a second ~~parameters~~ parameter of a recipient ~~computer~~ server control console from a first donor server control console and a second donor ~~computer server control consoles~~ console, said computer program product comprising:

a computer readable medium;

first program instructions to instruct said recipient server control console to register with said first donor server control console to receive notification when said first donor server control console has an update to said first parameter;

second program instructions to instruct said recipient server control console to register with said second donor server control console to receive notification when said second donor server control console has an update to said second parameter;

third program instructions, executed after said first program instructions register said recipient server control console with said first donor server control console, to instruct said recipient server control console to receive said notification from said first donor server control console and update said first parameter from said first donor server control console accordingly; and

fourth program instructions, executed after said second program instructions registers said recipient server control console with said second donor server control console, to instruct said recipient server control console to receive said notification from said second donor server control console and update said second parameter from said second donor server control console accordingly; wherein said first parameter comprises at least one of: a user ID, an authorization for said user ID, a password of a server operator, a grouping of servers managed by a server control console, an account information, a default settings for displays, a help desk telephone number for a server control console operator, a language designation for text displayed on a screen, an IP address of a server control console, an IP address of a server managed by said server control console; wherein said second parameter comprises at least one of: a user ID, an authorization for said user ID, a password of a server operator, a grouping of servers managed by a server control console, an account information, a default settings for displays, a help desk telephone number for a server control console operator, a language designation for text displayed on a screen, an IP address of a server control console, an IP address of a server managed by said server control console; and wherein said first, second, third and fourth program instructions are recorded on said medium for execution

by a computer system for updating said first and second parameters of said recipient server control console.

9. (Currently amended) A system for updating a first parameter and a second parameters parameter of a recipient computer server control console from a first donor server control console and a second donor computer server control consoles console, said system comprising:

a parameter replication donor program installed on each of said first donor server control console and said second donor server control console for providing updates to said first and second parameters, each of said first donor server control console and said second donor server control console having a respective central processing unit for executing said parameter replication donor program installed thereon;

~~means in~~ a parameter replication recipient program installed on said recipient server control console for registering with said first donor server control console to receive notification when said first donor server control console has an update to ~~said a~~ a first parameter; and means in said recipient console for registering with said second donor server control console to receive notification when said second donor server control console has an update to ~~said a~~ a second parameters, said recipient server control console having a central processing unit for executing said parameter replication recipient program installed thereon, wherein, after registering said recipient server control console with said first donor server control console, said parameter replication recipient program installed on said recipient server control console receives, means in said recipient console

~~for receiving~~ said notification from said first donor ~~server control~~ console and ~~updating~~  
~~updates~~ said first parameter ~~from said first donor console accordingly~~ of said recipient  
server control console; and wherein, after registering said recipient server control  
console with said second donor ~~server control~~ console, ~~said parameter replication~~  
~~recipient program installed on said recipient server control console receives means in said~~  
~~recipient console for receiving~~ said notification from said second donor ~~server control~~  
console and ~~updating~~ ~~updates~~ said second parameter ~~from said second donor console~~  
~~accordingly~~ of said recipient server control console.

10. (Currently amended) A method for updating a first parameter and a second  
parameters of a recipient ~~computer~~ server control console from a first donor server  
control console and a second donor computer server control consoles console, said  
method comprising the steps of:

providing said recipient server control console having a parameter replication  
program installed thereon for controlling one or more respective servers coupled to said  
recipient server control console, providing a first donor server control console having  
said parameter replication program installed thereon for controlling one or more  
respective servers coupled to said first donor server control console and providing a  
second donor server control console having said parameter replication program installed  
thereon for controlling one or more respective servers coupled to said second donor  
server control console, said parameter replication program including a parameter  
replication recipient program and a parameter replication donor program;

selecting, by said recipient server control console, said first and second parameters to be updated;

identifying a first parameter to be updated by said first donor server control console and identifying a second parameter to be updated by said second donor server control console;

said recipient server control console registering with said first donor server control console to receive notification when said first donor server control console has an update to said first parameter;

said recipient server control console registering with said second donor server control console to receive notification when said second donor server control console has an update to said second parameter;

after the step of said recipient server control console registering with said first donor server control console, said first donor server control console notifying said recipient server control console of an update of said first parameter and sending said update to said first parameter to said recipient server control console; and

after the step of said recipient server control console registering with said second donor server control console, said second donor server control console notifying said recipient server control console of an update to said second parameter and sending said update of said second parameter to said recipient server control console.
